Summary

Clean up your footprint!

[3D Printers](#) > [Other Printer Parts & Upgrades](#)

If you like & use my models please consider supporting my efforts with the button below.

Your support is what helps me continue to do this! Thank you!

...Please be sure to hit like & post a make, I'd love to see your prints!

EDIT: uploaded before & after graphs from my printer!

EDIT: ADDED VERSIONS THAT SHOULD FIT THE STOCK FEET BOLTS!

EDIT: Added 30mm & 35mm versions that use stock bolts.

EDIT: Added 10mm & 15mm Spacers that can be printed in hard plastic to boost the shorter feet for better stability but the same increased height!

Fancy new vibration Isolation feet for your shiny new SV08! Upgrade your feet to clean up your printing! Improved looks & vastly improved resonance compensation graphs (Y)!

you might not think they're very important or impressive but they actually are!

You'll see what I mean after your first run!

They took my input shaping graph from 11.7% vibration to 0.8%!! Which is insane for some simple little feet!

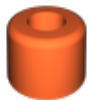

PRINT IN 95A TPU!!!! 100% INFILL!!!

DO NOT PRINT IN HARD PLASTIC!! The bolt holes are undersized so they grip!

You will need x4 M5 16mm cap head bolts for the 19mm version, maybe 14mm for the 16mm.

*The SV08's large rubber stock feet have an unloaded height of approximately 17-18mm
