### Summary

This changes the magneten-5-x-3-mm-lb-n3mi-dg.stl and moves the umbilical plate to the center.

This is a remix of the bottom left back panel with the N3MI-DG Umbilical plate. It moves the plate to the center and still allows you to print just two on for the back. I also created a rim for the rear window/plexi to rest against. The original is off to the left. I also added the rear window with the cutout. I am not the best @ CAD so I included the STEP files if anyone wanted to adjust things. Not sure if I exported the DWG and PDF properly for the rear panel.

Thanks to @KeithAugustey\_512077 for creating the original and sharing the files with me so that I could make this.
